IMPORTANT RISK INFORMATION

Short sales involve selling a security in anticipation that the price will decline; the loss is suffered if the value of the security rises rather than falls. In theory, short selling could result in unlimited loss. Foreign companies may be less liquid and more volatile; investments may be affected by fluctuation in currency rates, differences in financial standards, and government/economic stability. Annual portfolio turnover may exceed 100% resulting in more transaction costs such as brokerage commissions, mark-ups/mark-downs. Debt securities issuers may not be able to make interest or principal payments and/or could suffer adverse changes in financial condition that would lower the credit quality, leading to greater price volatility. The adviser may not correctly anticipate the relative returns and risks of the asset classes in which the fund invests. See the Prospectus for more details.
